2143

DATE MAILED: 04/22/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/985,827	Applicant(s) CHOI, MOON-JEONG	
	Examiner Joseph E. Avellino <i>JA</i>	Art Unit 2143	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 February 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-17 are presented for examination; claims 1, 5, 9, 13, and 17 independent.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on February 4, 2005 has been considered by the examiner.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ngo et al. (WO 00/04427) (cited by Applicant in IDS) (hereinafter Ngo) in view of Malkin et al. (EP 1 021 021) (cited by Applicant in IDS) (hereinafter Malkin).

4. Referring to claim 1, Ngo discloses a system connected to a home network (Figure 1, entire figure) in which a plurality of devices are connected to one another through the Internet, the system provides a certain device in the home network with a service (p. 7, lines 10-25) comprising:

a database that stores address information about the home network that subscribes to the service, and information about at least one of a plurality of service

Art Unit: 2143

recipient devices within the home network (col. 6, lines 15-33; col. 7, line 10 to col. 8, line 15).

Ngo does not specifically disclose the system transmits a notifying message to at least one of the plurality of service recipient devices prior to providing the service, to confirm whether the device can receive the service or not, and provides the service to the device after receiving an affirmative response from the device and the notifying message contains additional identifying information of the service recipient device as well as information about an address of the home network to which the plurality of devices belong. In analogous art, Malkin discloses another system connected to a home network for providing a service (i.e. data distribution) wherein the system transmits a notifying message (i.e. status message, PING) to at least one of the plurality of service recipient devices (i.e. client device) prior to providing the service, to confirm whether the device can receive the service or not, and provides the service to the device after receiving an affirmative response (i.e. client has reached the desired status) from the device and the notifying message (to the push proxy server from the awareness server) contains additional identifying information of the service recipient device as well as information about an address of the home network to which the plurality of devices belong (col. 6, line 19 to col. 7, line 57).

It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Malkin with Ngo since Ngo discloses that the system is used to collect data from remote meters, however does not specifically disclose an efficient method of collecting the information (p. 10, lines 5-10). This would

lead one of ordinary skill searching in efficient methods on collecting non-time dependent data, which would lead one to the system of Malkin and the efficient push technique thereby sending data only when the system is able to sufficiently handle the data distribution as supported by Malkin (col. 2, lines 15-20).

5. Referring to claims 2 and 3, Ngo discloses the invention substantively as described in claim 1. Ngo does not specifically state that the additional identifying information is used for one of the plurality of devices of a same kind that intends to receive a same type of service. In analogous art, Malkin discloses the additional identifying information (i.e. addressing information such as hostname and IP address) is used for one of the plurality of devices (i.e. client devices) of a same kind (i.e. they are both client computers of the system) that intends to receive a same type of service (i.e. the data push) (col. 7, lines 37-58). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Malkin with Ngo since Ngo discloses that the system is used to collect data from remote meters, however does not specifically disclose an efficient method of collecting the information (p. 10, lines 5-10). This would lead one of ordinary skill searching in efficient methods on collecting non-time dependent data, which would lead one to the system of Malkin and the efficient push technique thereby sending data only when the system is able to sufficiently handle the data distribution as supported by Malkin (col. 2, lines 15-20).

Art Unit: 2143

6. Referring to claim 4, Ngo discloses the invention substantively as described in claim 1. Ngo does not specifically state the service is a push service that provides a certain service to the devices repeatedly in a predetermined period. Malkin discloses another system in which the service is a push service that provides a certain service to the devices repeatedly (i.e. when the device satisfies a certain status) in a predetermined period (cols. 6-7). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Malkin with Ngo since Ngo discloses that the system is used to collect data from remote meters, however does not specifically disclose an efficient method of collecting the information (p. 10, lines 5-10). This would lead one of ordinary skill searching in efficient methods on collecting non-time dependent data, which would lead one to the system of Malkin and the efficient push technique thereby sending data only when the system is able to sufficiently handle the data distribution as supported by Malkin (col. 2, lines 15-20).

7. Claims 5-17 are rejected for similar reasons as stated above. Furthermore Ngo discloses the database stores dynamic IP addresses and IDs of the devices (p. 5, lines 25-35; p. 9, line 22 to p. 10, line 10).

Response to Arguments

8. Applicant's arguments filed February 25, 2005 have been fully considered but they are not persuasive.

Art Unit: 2143

9. Applicant argues, in substance, that (1) the PING message in Malkin does not confirm the device can receive the service or not, rather merely determine if the device is connected to a network, and (2) Malkin does not disclose providing a certain service to the devices repeatedly in a predetermined period.

10. As to point (1) the Office respectfully disagrees with Applicant's assertion that PING only checks the connection to the network. Malkin discloses that it checks the status of the client. Furthermore it checks to determine if there is a path to the connected client. PING inherently discloses that a device can receive a service since the PING packet must be received by the client, processed, formatted, request information pertaining to the status of the client, and transmit a packet stating that this information packet was received by the client. This does much more than just merely checking the connection of a device, it checks whether the target client has reached a desired status. Furthermore Malkin discloses that the proxy server 1040 queues up push requests after being notified by the awareness server that the client device is able to receive the transmission (col. 7, ¶ 30). To one of ordinary skill in the art, this is understood to mean that the server determines whether the device can receive the service or not. By this rationale the rejection is maintained.

11. As to point (2) the Office is taking the term "in a predetermined period" to be equivalent to the amount of data stored in the proxy push handler, the handler will repeatedly process data for the client until all the data is provided to the client. The

Art Unit: 2143

"predetermined period" as Applicant alleges is lacking from Malkin is the amount of time it requires to provide the push client with the data. Since it takes more time to transmit more data, and since this data is already stored by the proxy push server, it is already known how much time is required to send the data, thereby providing a predetermined period for which to provide service. By this rationale, the rejection is maintained.

Conclusion

12. Applicant has had numerous opportunities to amend the claimed subject matter, and has failed to modify the claim language to distinguish over the prior art of record by clarifying or substantially narrowing the claim language. Thus, Applicant apparently intends that a broad interpretation be given to the claims and the Examiner has adopted such in the present and previous Office action rejections. See *In re Prater and Wei*, 162 USPQ 541 (CCPA 1969), and MPEP 2111.

13. Applicant employs broad language, which includes the use of word, and phrases, which have broad meanings in the art. In addition, Applicant has not argued any narrower interpretation of the claim language, nor amended the claims significantly enough to construe a narrower meaning to the limitations. As the claims breadth allows multiple interpretations and meanings, which are broader than Applicant's disclosure, the Examiner is forced to interpret the claim limitations as broadly and as reasonably possible, in determining patentability of the disclosed invention. Although the claims are

Art Unit: 2143

interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir.1993).

Failure for Applicant to significantly narrow definition/scope of the claims and supply arguments commensurate in scope with the claims implies the Applicant intends broad interpretation be given to the claims. The Examiner has interpreted the claims with scope parallel to the Applicant in the response and reiterates the need for the Applicant to more clearly and distinctly define the claimed invention.

14. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph E. Avellino whose telephone number is (571) 272-3905. The examiner can normally be reached on Monday-Friday 7:00-4:00.

Art Unit: 2143

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on (571) 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
